

Dejan Zeljko cc221003

Link to my Node instance: <https://cc221003-10045.node.fhstp.io>

Short Description:

User can play vs other users.

Guests can play vs other guests.

If user play against each other, the game is saved to the database.

Login/Register functionality ready, but there seems to be a problem with result.insertId when I create a user. But on my local Node instance it's working. So I am trying to figure this out by tomorrow.
